

16-Step Checklist

To Build a System Allowing You To Send Millions Of Emails Every Month Directly to your customer's Inbox without any limitations...

Combine the power of Amazon AWS and Sendiio AR

Begin With

- Buy a New Domain Name
- Create a Sender Email Address (Zoho)
- Setup Sendiio Account
- Create an Amazon AWS Account

Verifications:

- Add Your Domain Name To AWS and Verify
- Verify SPF, DMARC, DKIM
- Very New Sender Email Address
- Set Up And Verify Google Postmasters

Import And List Cleaning

- Clean Your Email List With MillionVerifier
- Import Your Cleaned List To Sendio
- Download And Import “Ultimate Email Template”
- Send a Test Email To GlockApps And Mail-Tester
- Set Up 2 Tags: “Openers” and “Clickers”

Tracking And Scaling

- A/B Test Your First Email Campaign
- Tag And Segment Openers And Clickers
- Send To Unopens After 8 Hours

These are the exact steps we take to have an account fully setup to send millions of emails every month
